About The Good Plastic Company

The Good Plastic Company is a mission-driven organisation that repurposes plastic waste into usable materials. The company produces sustainable surface materials using 100% recycled and recyclable plastic under its Polygood® brand for the architecture & design (A&D) industry. Polygood® panels are utilised in the creation of contemporary, environmentally-conscious furniture and interior/exterior design elements.

We operate on a global scale because sustainable solutions are required worldwide. As the most innovative producer of 100% recycled and recyclable plastic panels, we currently operate across eight locations with two factories in Europe. Since 2018, we have partnered with industry giants like Nike, Samsung, Adidas, Coach, LUSH, McDonald's, and major international design and architecture firms such as Perkins&Will, MVRDV, Gensler, and M Moser to complete over 1000 projects to date, spanning the globe from Tokyo to San Francisco.

Our mission: sustainable design materials

The company's journey began with finding a purpose for the 400 million tonnes of plastic waste produced globally every year. We knew that interior furniture, fixtures, and equipment account for 7-10% of a building's overall carbon footprint. They can go on to equal, if not exceed, the footprint of a structure's construction over the course of an average building's lifespan. It became our mission to help with A&D industry replace traditional materials like virgin resins and other non-sustainable options for commercial projects. The answer is

Polygood®, a beautiful surface design material — built to last and fully recyclable at the end of its lifespan.

Creating such a versatile design material has required us to develop advanced technology in-house. Our proprietary equipment collects a wide array of data parameters during processing, including temperature and melting points, pressure, time, and melt flow index. This gives us a degree of control that is unique in the market, enabling us to ensure the highest quality products from recycled material and to manufacture at scale.

Our philosophy

Practising sustainability does not stop at circular manufacturing operations and using recycled materials. It is inherent to our vision, to how we work with people and interact as a team.

We proactively address our clients' needs by meeting their challenges with solid research, development, efficiency, abundant stock with consistent designs, and flexibility at every stage. Our dedicated specialists establish strong relationships with architects and designers, develop efficient production processes, and often work hand-in-hand with customers to craft custom patterns.

Our business environment is founded on principles of respect and mutual support, valuing each team member as we remain dedicated to the company's growth. Ideas, participation, and decision-making come from consulting personnel at every level of our organisation.

Polygood® is a versatile, high-end surface material made from 100% recycled & recyclable plastic by The Good Plastic Company

A Material with Meaning

Sustainability begins at the design phase. Our choice early on to use only tough recycled plastic materials when developing Polygood® panels has resulted in a waste-free, durable design — fully recyclable at the end of its long lifespan. Recognised for its reduced environmental impact, selecting Polygood® is one way the architecture and design industry can in turn meet its own rigorous international environmental standards.

Panels with a colourful past

Polygood® patterns are inspired by their past lives as appliances, manufacturing components, or single-use plastic items. The neutral shades of refrigerators or the vivid colours of spools and tubes come to life in a range of patterns, each with its own unique story.

We believe that, by generating demand for products made from recycled plastic, we can keep this valuable material from ending up in landfill, the oceans, or incinerators. We demonstrate to companies that they can make beautiful and functional new goods from waste and make a visible commitment to the circular economy. Our aspirational goal is to substitute virgin plastic and other non-sustainable materials wherever possible, thus making recycled plastic a new norm in design and architecture.

Polygood® Panel Specifications

Dimensions:

2800 x 1400 mm (110" x 55")

Thicknesses:

12 mm (½")

19 mm (¾")

Finish:

Standard: satin, single-faced

Available upon request: eggshell, gloss, or double-faced

Options:

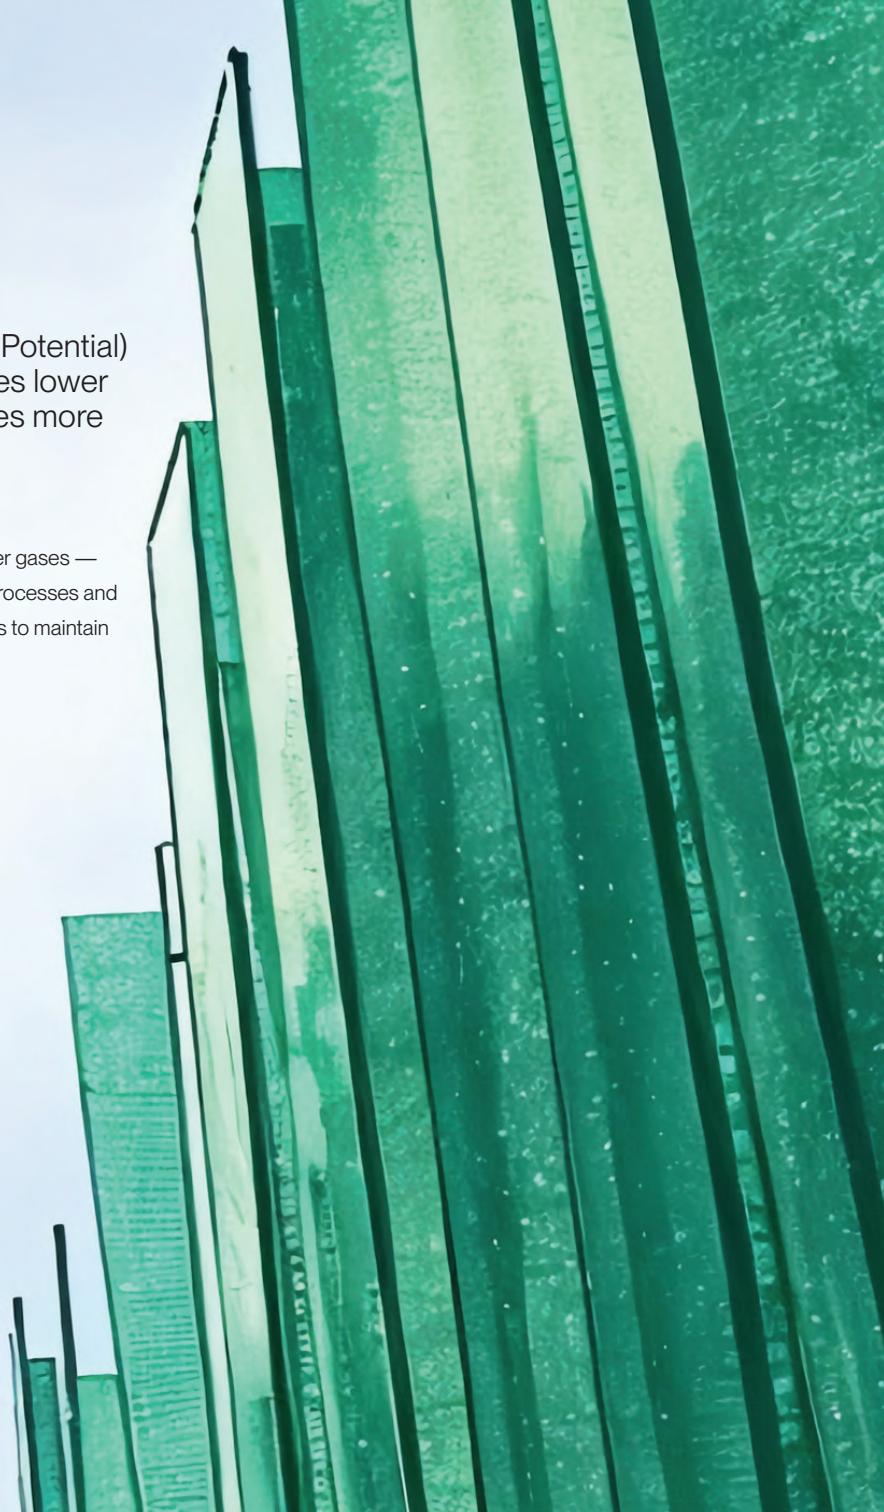

fire-resistant coating,
scratch-resistant coating

Sustainability

Global Warming Potential

Polygood® has a GWP (Global Warming Potential) of only 487 kg per ton, which is eight times lower than using virgin polystyrene and six times more eco-friendly than a leading solid surface material.

Based on this data — which includes CO₂, CH₄, N₂O, and other gases — we continue to benchmark our low-emission manufacturing processes and material sourcing against other surface material manufacturers to maintain our positive environmental impact.

Certifications that affirm our environmental accountability

Our Life Cycle Assessment provides full transparency, from raw material sourcing to panel manufacturing and end-of life product recycling. We are closing the waste loop and ensuring projects meet environmental standards.

Cradle to Cradle® Bronze certification

We take pride in being the only manufacturer of a recycled plastic material that holds Cradle to Cradle® Bronze certification. This rigorous, third-party programme evaluates and recognises Polygood® as a C2C material that makes positive environmental and social impacts.

Low VOC material

Our VOC A+ rating means our products have minimal volatile organic compound emissions, contributing to healthier indoor environments. Polygood® aligns with BREEAM and LEED standards for construction materials in the UK and EU, making it a low-VOC emitting material.

No hazardous substances

Polygood® is free from harmful substances like mercury, lead, and arsenic. Verified by TÜV Rheinland's ISO 17025 accredited lab, our product is safe and environmentally responsible.

EPD®

Environmental Product Declaration

After a thorough Life Cycle Assessment, The Good Plastic Company was granted a verified Environmental Product Declaration (EPD) for Polygood®. EPD serves as an invaluable asset in securing LEED and BREEAM certification for your projects.

Life Cycle Assessment

Our environmental footprint matters, along with our production and management processes. Performing a Life Cycle Assessment (LCA) follows our impact from cradle to grave for sustainability and operational reporting. We maintain quality and management systems in accordance with internationally-recognised ISO standards.

ISO 14001: Environmental Management

ISO 9001: Quality Management

ISO 45001: Occupational Health and Safety

Polygood's® Fire-Resistance Ratings

Polygood® panels have Euroclass fire-resistance ratings for two key applications:

For construction products (excluding flooring), Polygood® panels achieve a Euroclass E, s3-d0 rating (limited combustibility with high smoke development and no flaming droplets), with or without our special fire-retardant coating. However, testing shows that treated panels do demonstrate 2.5 times better fire resistance performance.

For flooring applications, panels with an FPCC coating reach a Euroclass B(f), s1 rating (moderate flammability and low smoke development) with an EN 13501-1 standard.

While Euroclass is the European Union standard, Polygood® also has an M3 rating for M classification — the French standard for a material's reaction to fire.

Polygood's® Food Safety Rating

Polygood® panels are certified completely safe for food contact, under European Union Commission Regulation No. 10/2011 on plastic materials and articles intended to come into contact with food.

The certification declares our material does not pose any risk to human health when coming into contact with food, after passing strict

controls on substances that can be used during manufacturing. The regulation sets out specific limits on the migration of certain substances from the plastic into the food, ensuring that any transfer remains within safe levels.

Material Composition

100% Recycled. 100% Recyclable.

What makes Polygood® stand out is our choice to manufacture the panels from a single type of plastic. This makes it the ideal candidate for upcycling, a concept behind high-value material reuse in circular manufacturing and design.

Using mixed plastic sources, on the other hand, would result in a form of downcycling, the suboptimal opposite of upcycling that makes a material less valuable and less reusable. In the case of plastics, mixing types would make it difficult to recycle again. Our mono material can be recycled and used yet again, a prime example of how sustainable choices in manufacturing can work to close the waste loop by remanufacturing materials once destined for landfill.

Who are our suppliers?

We manufacture our products using recycled polystyrene sourced from some of the largest, most established recycling centres throughout Europe — leaders in the field of collecting, sorting, and recycling plastic on a grand scale. Our suppliers' scale and maturity produce a reliable supply of high-quality raw material. This ensures we can make quality panels in significant volumes and produce consistent

Before it was Polygood®

Our panels once had a past life: the smooth insulation of refrigerators and freezers, household electronics, CD disk cases, disposable coffee cups, toys and games, disposable plates, bowls, cutlery, and components like cables, acoustic panels, and tubing. We source recycled polystyrene (PS) from these and other post-consumer and post-industrial waste sources.

Melted down and ultimately arriving at our facility in the form of flakes, granules, and beads of colour, these items have a chance to mix into beautiful patterns that adorn stores, hotels, universities, and installations for years to come. It is a design solution that contributes to the global effort against plastic pollution.

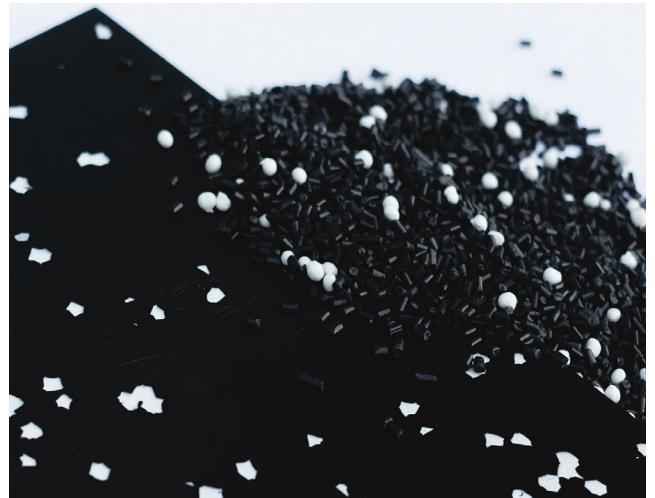

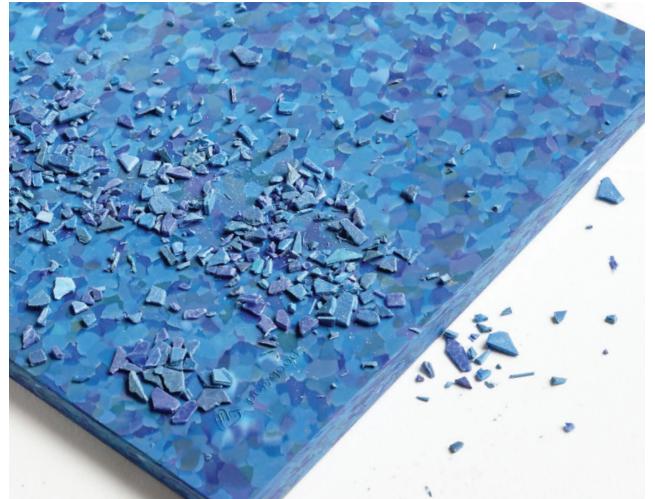

batch patterns, meeting the demands of even the largest projects.

We verify our suppliers to ensure that their quality and values match our vision and stringent procedures, along with our Cradle to Cradle® Certification. Our key suppliers hold the EuCertPlast certification, which guarantees the traceability, quality, and content of recycled plastics.

Transparent practises that prioritise sustainable manufacturing

We detail the origins of our materials, our suppliers, and why trust and accountability are at the core of our mission to conquer the plastic waste problem, one Polygood® panel at a time.

Our factories are the heart of our company

Novel manufacturing for unlimited possibilities

We have developed technology and equipment designed to recycle plastic from various waste streams, with a particular focus on post-consumer waste, which constitutes 90% of our raw material input. Additionally, our equipment allows us to experiment with textures and blend different waste streams to create visually stunning patterns. We can discuss plastic waste processing services for clients converting

their own plastic waste into new materials suitable for future furniture or interior design elements.

Our proprietary technology ensures the production of recycled panels of the highest quality under the Polygood® brand of the highest quality, supported by internationally-recognised standards.

Light Collection

Bright, airy patterns that bring a sense of lightness and openness to any space can be more adventurous than just different shades of white. Colourful accents add a touch of charm to pale backgrounds — and, of course, they are sustainable, being made from recycled appliances and single-use cutlery. This is the most scratch-resistant collection.

It is easy to clean and stain resistant, but it is not UV resistant and can yellow over time if used outdoors. That's why we recommend the Light Collection for high-traffic areas and indoor use. Note that the recycled plastic that goes into Salt Dune may show yellow or grey hues and vary slightly between batches.

Our Translucent Collection plays with light and a gossamer colour spectrum. Due to its origins (CD cases), the Translucent Collection is a particularly clear and smooth solution for creative design elements. Wonderful when backlit, these patterns catch any light source to reveal tiny, effervescent bubbles throughout.

We add natural pigments to add almost any colour tint, although we cannot match RAL colours. Thickness also varies from our standard by 1.5-2 mm. An optional matte or glossy finish can give the original patterns within this collection a different twist.

Customising Polygood®

Aesthetics mean everything, and the materials you choose convey even more meaning when they perfectly match a brand colour palette or unique design concept. We have created dozens of bespoke patterns for clients seeking Polygood® 100% recycled and recyclable plastic panels that are uniquely distinct, on-point, on-brand, and always client-centric.

Real-world examples

Custom material development is the opportunity to align your design with your organisation's identity and values, ensuring it stands out and communicates your message effectively. We have made over 100 customised patterns for clients all over the world.

Take-Back Programme

Our Take-Back-Programme is a key element of our sustainability commitment to rid the world of plastic waste by creating beautiful design materials. We as the manufacturer take responsibility for our products at the end of our panels' useful life.

The programme ensures that we can serve as a reliable partner for companies seeking to advance their sustainability practises. By providing this service for free, we are not only helping to close the waste loop but also to reduce the costs of potential incineration or waste management.

100% recyclable

Being made from a single type of plastic ensures that products made from Polygood® are recyclable. This makes a take-back programme possible, or recycling the product at any local recycling centre that accepts polystyrene. By ensuring that our products are 100% recyclable, we contribute to reducing waste, lowering emissions, and conserving natural resources.

We encourage designers to prioritise modularity and easy disassembly in their project layouts. This enables the separation of materials for conscious recycling.

How it works

1. Initiate the return

Start the take-back process by providing information about the products you wish to return, including type, quantity, and condition, through our website, by email, or by phone.

2. Assessment and approval

Our team evaluates the provided product details to determine eligibility for the programme. We'll notify you if the products are eligible for return and provide further instructions.

3. Packaging and shipping

Package the products and return them to our facility.

4. Product inspection

Upon arrival, our team inspects the returned products to evaluate their condition and potential for reuse or recycling.

5. Recycling and reuse

We or our recycling partners shred Polygood® remnants into smaller components and recycle them before they are reborn into new Polygood® panels.

An Iceberg in the Desert

Designed by Tellurico for Polygood® with the support of Danube Group

Amidst the desert's scorching heat, an unexpected oasis emerges – an iceberg providing refuge and a gathering place. In the last two decades, our planet has witnessed a staggering loss of 267 gigatonnes (Gt) of glacial mass annually, resulting in a 25% increase in sea levels.

This ecological shift has triggered storms, erratic weather patterns, habitat loss, and more. Human-induced pollution is the primary culprit, a concern highlighted by the Tellurico design studio's desert iceberg.

This juxtaposition of an iceberg in a desert city is a deliberate oxymoron, sparking curiosity and challenging conventional wisdom. Tellurico crafts iceberg sculptures from recycled plastic materials, using them as symbols of awareness, sustainability, and sculptural art. Their presence in the cityscape offers a unique and thought-provoking addition. Beyond aesthetics, the icebergs are a call to action, shedding light on rising temperatures, glacial depletion, and sea level rise linked to human plastic consumption.

Tellurico repurposes over 800 kg of plastic and collaborates with The Good Plastic Company to produce this installation using their Polygood material made from 100% recycled plastic.

TGPC also produced the panels that are used to realize the icebergs. Its sustainable advantages of this material. Each pattern has its own unique benefits and the Polygood panels are produced from a wide range of post-consumer plastic waste sources, from refrigerators to single-use cutlery, electronics, and in-

The project was made possible thanks to the collaboration between Tellurico, The Good Plastic Company, and Polygood.
