

Sustainable Hospitality design with **Polygood**®

Enhance your guest experience with Polygood® – sustainable surface solutions designed for modern hospitality.

premium quality panels

versatile applications

100% recycled plastic content

100% recyclable

100% durability

THE FUTURE IS **POLYGOOD®**

Elegant marble, inventive terrazzo, or playful, contemporary patterns — all made from rugged, recycled plastic that lasts

Architects and designers creating hotel rooms, lobbies, restaurants, bars, and social spaces want to merge their beautiful concepts with the growing need for a design material that is robust, waterproof, customisable, long-lasting, and readily available for global roll-outs across all locations.

The future is Polygood®, a design material suited for nearly every application the industry demands. Made from recycled plastic, it has the right look and feel, without using the Earth's scarce virgin materials and with lower greenhouse gas emissions.

Polygood® is the answer for hospitality interiors

By choosing Polygood® panels for a project's furniture and fixtures, the hospitality industry can demonstrate a commitment to sustainability, appealing to the growing segment of eco-conscious travelers and diners, without compromising on luxury or design.

Remarkable in its workability, Polygood® seamlessly integrates into virtually any design aesthetic.

With several collections to explore, its marble and stone-like patterns complement natural and Mediterranean-inspired spaces. Our vibrant and bold options suit modern, contemporary settings. For minimalistic interiors, Polygood®'s sleek black and white recycled surfaces offer a refined touch.

Its innovative manufacturing process not only rescues tons of existing plastic from landfill, but at the end of each project's lifespan, every used panels and offcuts can also be returned and recycled anew to make new panels.

POLYGOOD® PANEL SPECIFICATIONS

Dimensions:

2800 x 1400 mm (110" x 55")

Thicknesses:

12 mm (1/2")
19 mm (3/4")

Finish:

Standard:
Available upon request:

satin, single-faced
eggshell, gloss, or double-faced

Options:

fire-resistant coating,
scratch-resistant coating

Note: All imperial measurements provided in parentheses throughout this document are approximate and based on the metric equivalents.

PANELS WITH A COLORFUL PAST

Polygood® patterns are inspired by their past lives as appliances, manufacturing components, or single-use plastic items. The neutral shades of refrigerators or the vivid colors of spools and tubes come to life in a range of patterns, each with its own unique story. We believe that, by generating demand for products made from recycled plastic, we can keep this valuable material from ending up in landfill, the oceans, or incinerators. We demonstrate to companies that they can make beautiful and functional new goods from waste and make a visible commitment to the circular economy. Our aspirational goal is to substitute virgin plastic and other non-sustainable materials wherever possible, thus making recycled plastic a new norm in design and architecture.

We detail the origins of our materials, our suppliers, and why trust and accountability are at the core of our mission to conquer the plastic waste problem, one Polygood® panel at a time.

100% recycled & recyclable plastic

PRODUCT APPLICATIONS

Table tops & horizontal surfaces

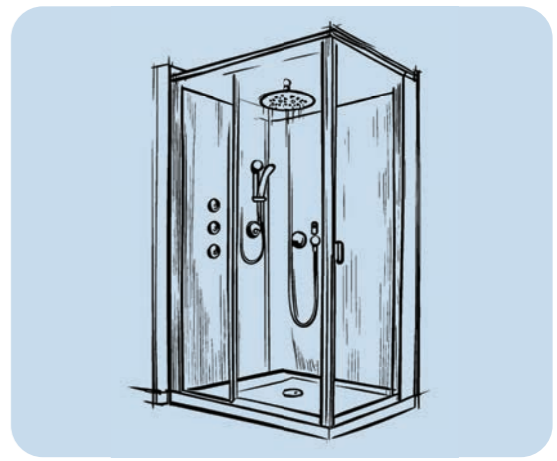

Impressive lighting

Wash basins

Shower tiles & dividers

Vanity Units

Reception desks & bars

A SUSTAINABLE, GREEN SURFACE MATERIAL

As the consequences of climate change become more and more present, architects, builders, and the design industry are increasingly including sustainability criteria in the spaces we inhabit and occupy.

Polygood® is made from a single type of plastic — that makes it a 100% recyclable material.

The choice of materials is a fundamental aspect of a building's positive impact on people, society, and the planet. Meanwhile, The Good Plastic Company is on a mission to make its own positive impact: transforming the world's plastic waste into a material that can be replicated at scale for large design projects.

This is why Polygood® was developed, to help companies choose upcycled, waste-free materials to make beautiful and functional furniture, flooring, display fixtures, cladding, facades, and just about anything that wood or conventional solid surface options can create.

Since 2018, the company has not only transformed a significant amount of plastic for use in hotels and restaurants, but has also helped projects to meet BREEAM or LEED criteria when using Polygood®, thanks to the eco-friendly Global Warming Potential and environmental certifications detailed here.

Global Warming Potential

Global Warming Potential (GWP) is a crucial metric for building materials as it quantifies their contribution to climate change, allowing architects and builders to make environmentally-conscious choices.

Polygood® has a GWP (Global Warming Potential) of only 487 kg per ton, which is eight times lower than using virgin polystyrene and six times more eco-friendly than a leading solid surface material.

Based on this data — which measures levels of CO₂, CH₄, N₂O, and other gases — we continue to benchmark our low-emission manufacturing processes and material sourcing against other surface material manufacturers to maintain our positive environmental impact.

CERTIFICATIONS THAT AFFIRM OUR ENVIRONMENTAL ACCOUNTABILITY

Our Life Cycle Assessment provides full transparency, from raw material sourcing to panel manufacturing and end-of-life product recycling. We are closing the waste loop and ensuring projects meet environmental standards.

Cradle to Cradle® Bronze certification

We take pride in being the only manufacturer of a recycled plastic material that holds Cradle to Cradle® Bronze certification. This rigorous, third-party program evaluates and recognises Polygood® as a C2C material that makes positive environmental and social impacts.

Environmental Product Declaration

After a thorough Life Cycle Assessment, The Good Plastic Company successfully went through independent verification of its Environmental Product Declaration (EPD) for Polygood®. An EPD serves as an invaluable asset in securing LEED and BREEAM certification for your projects.

Low VOC material

Our VOC A+ rating means our products have minimal volatile organic compound emissions, contributing to healthier indoor environments. Polygood® aligns with BREEAM and LEED standards for construction materials in the UK and EU, making it a low-VOC emitting material.

Food contact safe

Polygood® is certified as safe for food contact. This certification is in accordance with European Commission Regulation No. 10/2011 on plastic materials and articles intended to come into contact with food. The certification process involves rigorous testing and analysis to ensure that our materials meet the highest safety standards.

Life Cycle Assessment

Our environmental footprint matters, along with our production and management processes. Our Life Cycle Assessment (LCA) follows our impact from cradle to grave for sustainability and operational reporting.

ISO Certifications

We maintain quality and management systems in accordance with internationally-recognised ISO standards.

ISO 14001: Environmental Management

ISO 9001: Quality Management

ISO 45001: Occupational Health and Safety

No hazardous substances

Polygood® is free from harmful substances like mercury, lead, and arsenic. Verified through comprehensive chemical testing at TÜV Rheinland's ISO 17025 accredited lab, our product is safe and environmentally responsible.

LIGHT COLLECTION

Classic hospitality spaces with The Light Collection – these offer a fresh take on neutral palettes to brighten any environment. Delightful pops of color add that extra spark of personality. Imagine a sun-drenched hotel lobby that welcomes guests with cream or white tones from recycled refrigerators, or a serene spa retreat that exudes tranquility with our completely waterproof patterns.

The Translucent Collection brings a unique dimension to hospitality spaces by turning color and light into key design elements. Made from clear, recycled CD jewel cases, these materials create eye-catching pieces that can be backlit, transforming surfaces and furniture into striking focal points. Certain patterns contain opaque elements, for a unique 3D effect.

The Translucent Collection is well-suited for various hospitality settings, from hotel bars and spas to restaurants and event spaces. It allows you to make a bold design statement while demonstrating a commitment to creative recycling.

This collection is ideal for:

- Light-emitting walls or reception desks
- Adding colorful accents to interior designs
- Creating interesting visual effects
- Mixing patterns or adding your own custom color tint

BATH-ROOMS

Transform the bathroom from a functional space into a haven of luxury and design. Traditional ceramic tiles and fixtures pale in comparison to the sleek sophistication of Polygood® in wet areas, including wall panels, vanity units, shower dividers, and washbasins. The material is waterproof and rot proof, ensuring long-lasting, stylish durability.

Polygood® is thermoformable, enabling the effortless creation of custom basins and unique shapes.

RESTAURANTS

The dining experience is as much about the atmosphere as it is about the cuisine. Whether for cozy breakfasts, quick business lunches, or elegant dinners, Polygood® brings both visual appeal and durability to hotel dining spaces.

As a certified food-safe material, Polygood® is perfect for table tops, bar counters, kitchen islands, and dining tables. Its wide range of patterns — from light terrazzo to rich, eclectic designs — helps create distinctive spaces within the restaurant, adding character and personality that guests will remember long after their stay.
