

Sustainable Office design with **Polygood®**

Create inspiring work environments with Polygood® –
sustainable surface solutions for modern office spaces.

premium quality panels

versatile applications

100% recycled plastic content

100% recyclable

100% durability

THE FUTURE IS **POLYGOOD®**

Elegant marble, inventive terrazzo, or playful, contemporary patterns — all made from rugged, recycled plastic that lasts

Modern workplaces demand more than just functionality — they call for inspiring, durable, and environmentally responsible materials. Polygood® answers this need with surfaces that are robust, easy to maintain, and visually compelling.

Made entirely from recycled plastic, Polygood® supports sustainability goals without compromising on aesthetics or performance. It's ideal for high-use environments such as reception areas, meeting rooms, workstations, kitchens, and social zones — wherever design and durability must go hand in hand.

Polygood® is the answer for office interiors

With a wide range of patterns and finishes, Polygood® fits effortlessly into diverse interior styles: from refined minimalism to bold, creative expressions. Its cleanability and impact resistance make it especially suited for agile, future-ready workplaces.

What's more, Polygood® panels can be returned and recycled at the end of their lifecycle — helping organisations reduce waste and contribute to a circular economy.

POLYGOOD® PANEL SPECIFICATIONS

Dimensions:

2800 x 1400 mm (110" x 55")

Finish:

matte, glossy, satin

Thicknesses:

12 mm (½")

19 mm (¾")

Note: All imperial measurements provided in parentheses throughout this document are approximate and based on the metric equivalents.

PANELS WITH A COLORFUL PAST

Polygood® patterns are inspired by their past lives as appliances, manufacturing components, or single-use plastic items. The neutral shades of refrigerators or the vivid colors of spools and tubes come to life in a range of patterns, each with its own unique story. We believe that, by generating demand for products made from recycled plastic, we can keep this valuable material from ending up in landfill, the oceans, or incinerators. We demonstrate to companies that they can make beautiful and functional new goods from waste and make a visible commitment to the circular economy. Our aspirational goal is to substitute virgin plastic and other non-sustainable materials wherever possible, thus making recycled plastic a new norm in design and architecture.

We detail the origins of our materials, our suppliers, and why trust and accountability are at the core of our mission to conquer the plastic waste problem, one Polygood® panel at a time.

100% recycled & recyclable plastic

PRODUCT APPLICATIONS

Reception Desks & Lobby Areas

Workstations & Desktops

Meeting Room Tables

Kitchen & Breakout Areas

Storage & Shelving Units

Phone Booths & Private Pods

A SUSTAINABLE, GREEN SURFACE MATERIAL

As the consequences of climate change become more and more present, architects, builders, and the design industry are increasingly including sustainability criteria in the spaces we inhabit and occupy.

Polygood® is made from a single type of plastic — that makes it a 100% recyclable material.

The choice of materials is a fundamental aspect of a building's positive impact on people, society, and the planet. Meanwhile, The Good Plastic Company is on a mission to make its own positive impact: transforming the world's plastic waste into a material that can be replicated at scale for large design projects.

This is why Polygood® was developed, to help companies choose upcycled, waste-free materials to make beautiful and functional furniture, flooring, display fixtures, cladding, facades, and just about anything that wood or conventional solid surface options can create.

Since 2018, the company has not only transformed a significant amount of plastic for use in hotels and restaurants, but has also helped projects to meet BREEAM or LEED criteria when using Polygood®, thanks to the eco-friendly Global Warming Potential and environmental certifications detailed here.

Global Warming Potential

Global Warming Potential (GWP) is a crucial metric for building materials as it quantifies their contribution to climate change, allowing architects and builders to make environmentally-conscious choices.

Polygood® has a GWP of only 1,074.82 pounds per tonne, which is eight times lower than using virgin polystyrene and six times more eco-friendly than a leading solid surface material.

Based on this data — which measures levels of CO₂, CH₄, N₂O, and other gases — we continue to benchmark our low-emission manufacturing processes and material sourcing against other surface material manufacturers to maintain our positive environmental impact.

CERTIFICATIONS THAT AFFIRM OUR ENVIRONMENTAL ACCOUNTABILITY

Our Life Cycle Assessment provides full transparency, from raw material sourcing to panel manufacturing and end-of-life product recycling. We are closing the waste loop and ensuring projects meet environmental standards.

Cradle to Cradle® Bronze certification *Global*

We take pride in being the only manufacturer of a recycled plastic material that holds Cradle to Cradle® Bronze certification. This rigorous, third-party program evaluates and recognises Polygood® as a C2C material that makes positive environmental and social impacts.

Low VOC material *Global*

Our VOC A+ rating means our products have minimal volatile organic compound emissions, contributing to healthier indoor environments. Polygood® aligns with BREEAM and LEED standards for construction materials in the UK and EU, making it a low-VOC emitting material.

Food contact safe *European Union, United Kingdom*

Polygood® is certified as safe for food contact. This certification is in accordance with European Commission Regulation No. 10/2011 on plastic materials and articles intended to come into contact with food. The certification process involves rigorous testing and analysis to ensure that our materials meet the highest safety standards.

California Proposition 65 *USA*

Also known as the Safe Drinking Water and Toxic Enforcement Act, California Proposition 65 requires clear labeling of products containing chemicals known to cause cancer, birth defects, or reproductive harm. Although it is a state regulation, its influence extends across the United States and globally due to California's strict standards and market reach. Polygood® complies with Prop 65 requirements, ensuring safety and transparency for consumers. Prop 65-compliant material.

EPD®

Environmental Product Declaration *Global*

After a thorough Life Cycle Assessment, The Good Plastic Company successfully went through independent verification of its Environmental Product Declaration (EPD) for Polygood®. An EPD serves as an invaluable asset in securing LEED and BREEAM certification for your projects.

Life Cycle Assessment

Our environmental footprint matters, along with our production and management processes. Our Life Cycle Assessment (LCA) follows our impact from cradle to grave for sustainability and operational reporting.

ISO Certifications *Global*

We maintain quality and management systems in accordance with internationally-recognised ISO standards.

- ISO 14001: Environmental Management
- ISO 9001: Quality Management
- ISO 45001: Occupational Health and Safety

No hazardous substances

Polygood® is free from harmful substances like mercury, lead, and arsenic. Verified through comprehensive chemical testing at TÜV Rheinland's ISO 17025 accredited lab, our product is safe and environmentally responsible.

Declare.

Declare Label *United States, Canada, European Union*

Declare is a transparency certification by the International Living Future Institute, providing details on product ingredients, sourcing, and manufacturing. Recognised in the US, Canada, and EU, it supports healthier, more sustainable building choices. Polygood® is Red List Free, containing none of the harmful chemicals identified in the Living Building Challenge Red List. Declare-listed, Red List Free material

GROWTH COLLECTION

Inspired by nature, designed for the future of work. The Growth Collection brings the organic beauty of earthy textures, stone-like finishes, and soft natural hues into the office environment. With eight distinctive patterns—Cliff, Oyster, Pebble, Midnight, Pumice, Frost, Gossamer, and Haze—this collection transforms meeting rooms, workstations, and collaboration zones into spaces that inspire focus and creativity. Made entirely from post-consumer recycled plastic, these surfaces demonstrate that sustainable materials can be as elegant as they are responsible.

LIGHT COLLECTION

Classic office spaces deserve a fresh perspective. The Light Collection offers a modern take on neutral palettes, brightening work environments with clean, refined aesthetics. Whether it's a sleek reception area, a minimalist coworking space, or an inspiring meeting room, these light tones create a sense of openness and clarity. Crafted from recycled refrigerators and consumer electronics, these patterns bring sustainability to the workplace—without compromising on style.

The Translucent Collection brings a new dimension to office design, using color and light as key elements to create inspiring work environments. Made from recycled CD jewel cases, these materials can be backlit, transforming surfaces and furniture into striking architectural features. Some patterns include opaque elements, adding a unique 3D effect to workspace interiors. Perfect for modern offices, this collection enhances spaces with dynamic visual effects while reinforcing a commitment to sustainable, creative design.
